Cost of the IVMMD MKII Mine Detection System

- 1 IVMMD Mine Detection System (items 1 – 7) [Commercial Pricing Information](#)

The commercial published price for the IVMMD MKII system varies based upon configuration. As an example some configurations include a Bluepack and a Prescribed Load List (“PLL”).

Please note there were many improvements made to the IVMMD MKII system to improve its comfort, durability, and functionality; none of which altered the basic architecture or have negative implications on safety or reliability. A list of these additional upgrades and improvements is available, if needed, and include such things as: shielded wiring harnesses (EMI / EMC shielding), addition of larger access steps for easier access, increased capacity steering pump for easier steering, road tires for better tire life and handling, etc., etc. These items are upgrades to the IVMMD MKI system and will be a part of the basic commercial configuration for all future sales of IVMMD MKII systems.

For questions concerning configuration options or additional requirements please contact: Shon Craig at 703-791-4027 or Ed Fearon at 972-716-4000.
